

MATLAB: Podpora vzdělávání (nejen) na VŠ

9.9.2021, Brno

Technical Computing Camp 2021

Martina Mudrová
HUMUSOFT
MartinaM@humusoft.cz

Campus-Wide licence v přehledu

Motto: „*MATLAB Access for Everyone, Anywhere*“

- Kompletní konfigurace produktů kromě certifikačních kitů
- MATLAB Parallel Server s neomezeným počtem procesů
- Další služby
 - Online Training Suite
 - MATLAB Online, Drive, Mobile
 - MATLAB Grader

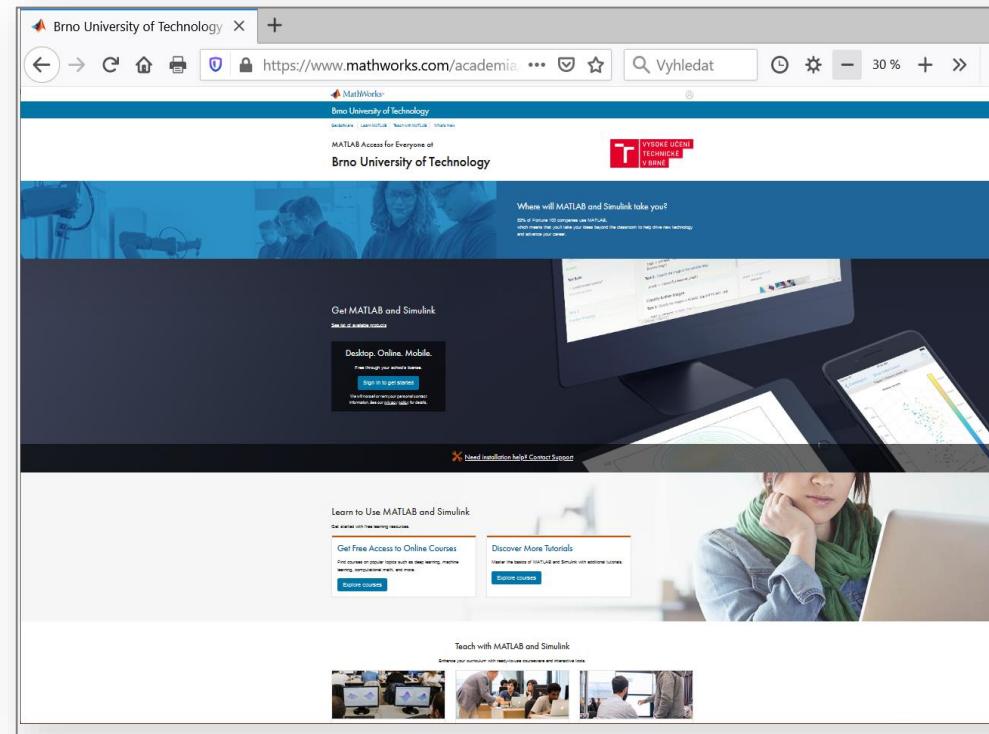

- Akademická licence (není možné komerční využití)
- MATLAB může být nainstalován na všech počítačích školy
- Sítové instalace, Designated Computer instalace, Individual instalace
- Individuální instalaci mohou mít **všichni zaměstnanci i všichni studenti univerzity, a to i na svých soukromých osobních počítačích**

Přístup ke Campus-Wide licenci

prostřednictvím MATLAB Portálu příslušné univerzity

Např pro VUT:

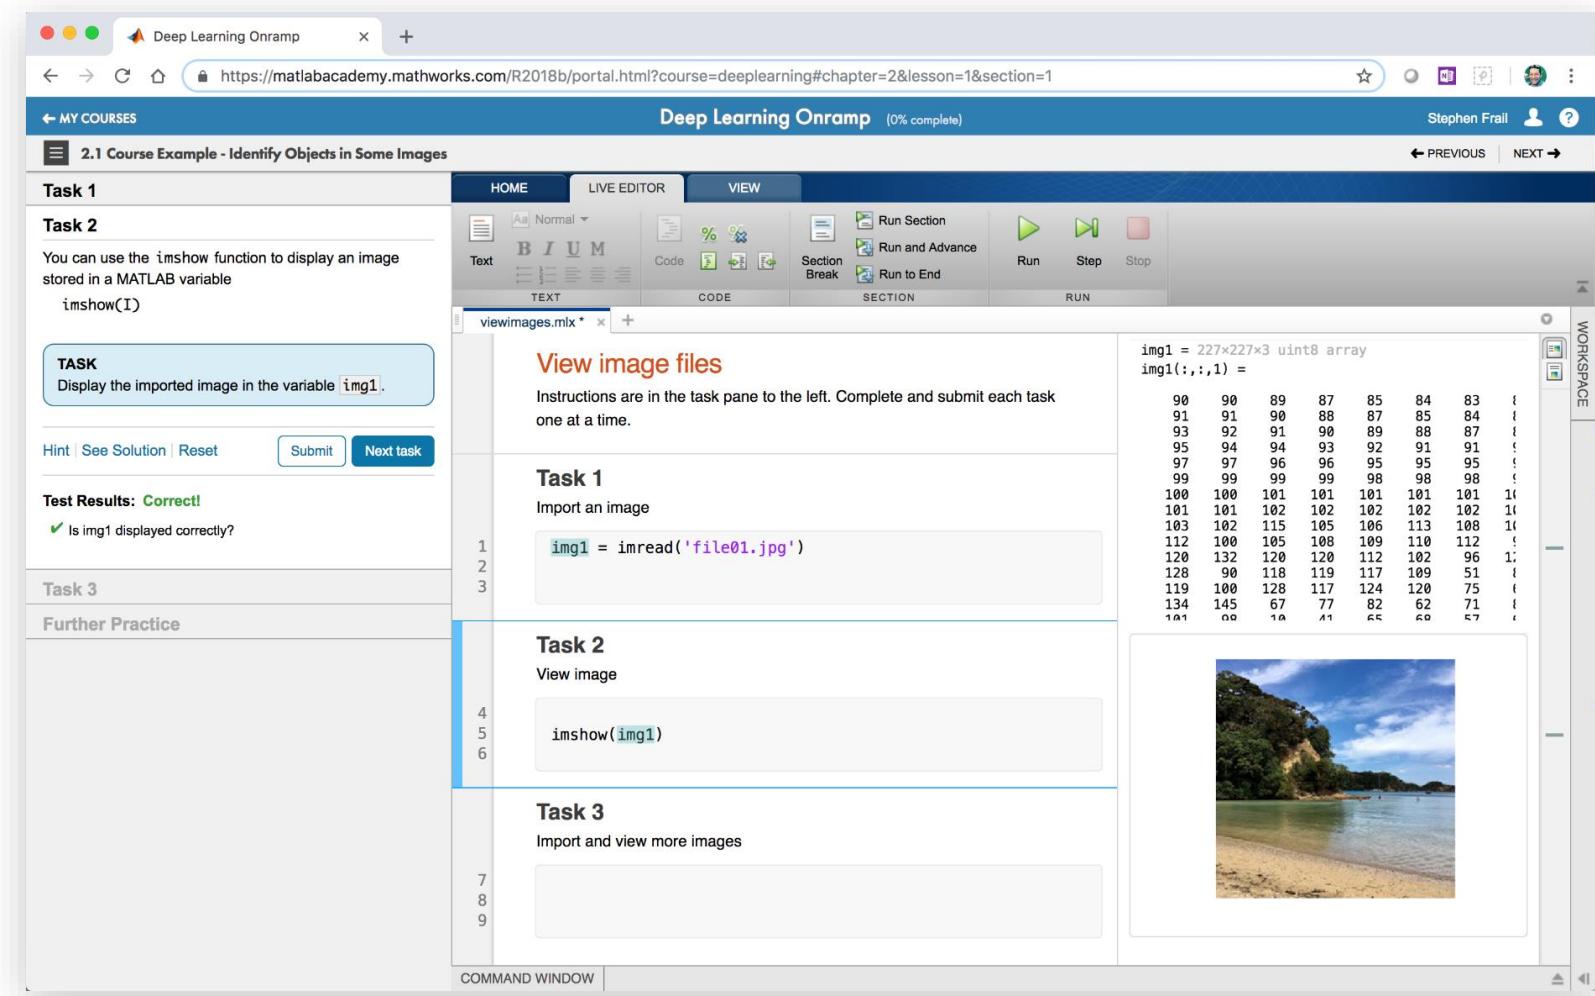

<https://www.mathworks.com/academia/tah-portal/brno-university-of-technology-31462990.html>

MATLAB Online Training Suite

(MATLAB Academy)

- Sada online kurzů
- K dispozici kdykoli a kdekoli – **postačuje počítač s webovým prohlížečem**
- **Vlastním tempem**, možnost kurz kdykoli přerušit
- Průběžné kvízy - **okamžitá zpětná vazba** k řešení úloh
- **Osvědčení o absolvování** (pdf nebo **online odkaz**)

<https://matlabacademy.mathworks.com/>

MATLAB Grader v přehledu

- Interaktivní výuka
 - tvorba interaktivních úloh a jejich distribuce studentům
 - sdílení úloh s dalšími instruktory
- Automatizované hodnocení úloh
 - okamžitá zpětná vazba
 - analýza úspěšnosti (studenta, skupiny)
- Integrace s Learning Management System
 - Moodle (obecně splňující standardy LTI 1.1, 1.3, aj.)
- Připravené úlohy

Your Script

```
1 % Load the data. Every day from 1900 - 2017.
2 BostonTemps = readtable('BostonDailyHighLowTemps.xlsx');
3
4 % Group by day of year. Then find the average low temperature
5 % for each day of the year and the standard deviation of the
6 % temperature for that day.
7 gDays = findgroups(day(BostonTemps.Date, 'dayofyear'));
8 avgTmin = splitapply(@mean, BostonTemps.Tmin, gDays);
9 stdTmin = splitapply(@std, BostonTemps.Tmin, gDays);
10
11 % Find the number of days in each year where Tmin < avgTmin
```

Assessment: 80%

✓ Is cross-sectional area correct?	10% (10%)
✓ Is the Modulus of Elasticity correct?	30% (30%)
✓ Is yield strength calculated correctly?	30% (30%)
✓ Is ultimate strength correct?	10% (10%)
✗ Is fracture strength correct? Variable fracture has an incorrect value.	0% (20%)

Total: 80% (100%)

Close x

Using DFT to compute convolutions

hide details...

The DFT is often used to compute time-domain convolutions, but you must be careful to distinguish between linear convolution (which is usually what you want) and circular convolution (which is involved in DFT properties).

Write a function `dftconv` that accepts three inputs:

- `h`: the first signal (e.g., an FIR filter)
- `x`: the second signal
- `N`: an integer greater than or equal to the length of `h` and `x`.

and return two outputs:

- `conv_circ`: the circular convolution of `h` and `x` using `N` points (i.e., using DFTs of length `N`)
- `conv_lin`: the linear convolution of `h` and `x` (using appropriately-sized DFTs)

Use the `dft` and `idft` functions in your solution. Do not use the `ccconv` and `conv` functions to compute the convolutions. Test your function using the test inputs in the 'Code to call your function' box.

Problem Type

Function

Code

[Reference Solution](#) [Learner Template](#)

```
1 function [conv_circ, conv_lin] = dftconv(h,x,N);
2
3 l_x = length(x);
4 l_h = length(h);
5
6 if N>max([l_x l_h])
7    error('N must be at least the length of the longer signal.')
8 end
9
10 % Compute order-N circular convolution based on length-N FFTs
11
12 conv_circ = ifft(fft(h,N).*fft(x,N));
13
14 % Compute linear convolution based on appropriate-length FFTs/zero padding
15
16 M = l_x+l_h-1;
17 conv_lin = ifft(fft(h,M).*fft(x,M));
```

How to call the function (when the learner clicks 'Run')

```
1 h = [1 2 3];
2 x = [1 2 2 1];
3 [conv_circ,conv_lin] = dftconv(h,x,4);
```

Assessment

> **Test 1** Are the outputs correct for the test inputs? (Pretest)
MATLAB Code

> **Test 2** Are the outputs correct for randomized inputs?
MATLAB Code

Convolution in Digital Signal Processing
Curriculum Module

Created with R2020b. Compatible with R2020b and later releases.

Description

This package contains *live scripts* and supporting data files centered around the fundamentals of convolution in digital signal processing. These materials are designed to be flexible and can be easily modified to accommodate a variety of teaching and learning methods. Used in a sequence, the live scripts progressively add depth to the topic. However, each script can be easily adapted for standalone use. We include a brief background, interactive illustrations, tasks, reflection questions, application examples, and guided exercises for the different concepts explored.

Suggested Prework

[MATLAB Onramp](#) – a free two-hour introductory tutorial to learn the essentials of MATLAB.

Details

convolutionBasics mlx
Products: MATLAB, Signal Processing Toolbox
Learning Goals:

- Define and compute convolution of two 1-D signals
- Use FFT to compute 1-D convolution
- Define and compute circular convolution
- Achieve equivalence between circular and linear convolution

convolutionLTI mlx
Products: MATLAB, Signal Processing Toolbox
Data files: *ringtones.wav*, *1st_baptist_nashville_balcony.wav*
Learning Goals:

- Identify the moving average operation as a simple LTI system
- Define an LTI system
- Compute the output of an LTI system for an arbitrary input signal given its impulse response

convolutionFilters mlx
Products: MATLAB, Signal Processing Toolbox, Image Processing Toolbox (optional), Deep Learning Toolbox (optional)
Data files: *lettert.png*, *flower.jpg*
Learning Goals:

- Explain the frequency domain implications of convolving two signals in the time domain
- Apply convolution to perform low pass filtering of signals
- Define and compute convolution of two 2-D signals
- Perform spatial filtering of images to achieve effects such as blurring and embossing

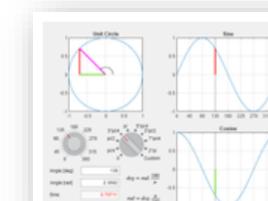

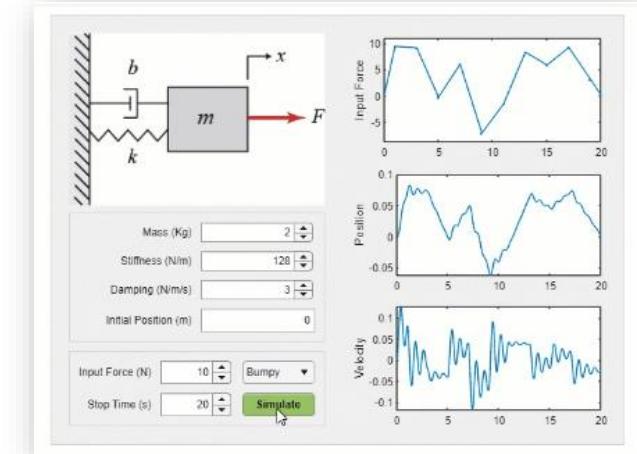

practiceExerciseSolsn mlx
This script contains completed solutions for all the practice problems.
